137-1957-12-23119

Translation from: Referativnyy zhurnal, Metallurgiya, 1957, Nr 12, p 36 (USSR)

AUTHORS: Gribov, S. L., Banshchikov, A. M.

TITLE: Toward the Increased Durability of the Checkers of
the Regenerator of an Open-hearth Furnace (Uvelicheniye
stoykosti regenerativnykh nasadok)

PERIODICAL: Tekhnol. transp. mashinostroyeniya, 1957, Nr 2, pp 24 - 29

ABSTRACT: Forced melting should not be attempted if the upper layers of the checkers (CB) consist of Dinas brick (B), because the maximum temperature of the top of the CB must not exceed 1280°; therefore, Dinas brick should not be employed in furnaces with standard crowns. The chamotte brick used in the CB and containing 40 - 42 percent of alumina is sufficiently durable at temperatures not exceeding 1350° at the top of the CB. It is not expedient to attempt to protect the top of the CB by covering it with chrome - magnesite brick, because the Dinas brick of the CB disintegrates under the protective layers of the chrome-magnesite. The same protective methods applied to CB made of chamotte brick result in increased durability of the CB and are recommended for furnaces with standard crowns and with temperatures not exceeding 1450°.

TITLE: Network planning [Use of work-flow diagrams to control operations]

SOURCE: Vestnik protivovozdushnoy oborony, no. 11, 1966, 52-57

TOPIC TAGS: operations research, ~~electronic equipment~~, equipment maintenance, ~~radar station~~, ~~industrial management~~, ~~armed force logistics~~

ABSTRACT: The authors of this article state that the use of work-flow diagrams by the electronics troops of the air-defense forces has given good results. This system offers advantages in the management and execution of research work, in heavy industry, and in other branches of the national economy. The 1964-66 experimental period has proved that the operational reliability of radar stations is improved by using the new system. The time required for repair work on radar stations has been shortened by 2-3 times. Orig. art. has: 2 tables. [WS]

USSR/Medicine - Pathology, Cellular
Nervism

"Review of O. I. Karakyan's Book 'A Criticism
of the Philosophic Foundations of Cellular Pa-
thology and the Theory of Nervism in the Medicine
of Our Country,'" published by Acad Med Sci USSR,
Moscow, 1951, by V. M. Banshchikov (reviewer)

Zhur Nevropat i Psich, Vol 53, No 2, pp 155-159

This adverse review of a book published in 1951
deals with the theories of Rudolf Virchow and
his influence on medicine in the USSR and abroad.

255T42

PA 255T42

Praises author for recognizing that a defeat of
Virchow's theories was accomplished by Soviet
scientists such as O. B. Lepeshinskaya,
A. D. Speranskiy, etc. Summarizing his review,
the critic accuses the author of getting confused
in his efforts to "materialize" Virchow and over-
looking the essentials of the methodology of his
conception of cellular pathology. Critic considers
that the book was written in haste and without
much thought.
